

Retrieving Information

Using the UBuild API you can retrieve information using the HTTP GET method.

Methods

Below are the endpoints you can use to retrieve information from UBuild:

/queue

Get all the currently queued builds.

Accepts:

- Query/Params
 - "token" - The user's access token. (optional; depending on api.config)

Returns:

- A JSON array of objects representing queued builds.
-

/report

Gets a build reporting matching the UID provided.

Accepts:

- Query/Params
 - "token" - The user's access token. (optional; defined in api.config)
 - "uid" - The UID of the build for which you want to receive a report.

Returns:

- A JSON object representing the build report.
-

/reports

Gets all currently stored build reports.

Accepts:

- Query/Params
 - "token" - The user's access token. (optional; defined in api.config)

Returns:

- A JSON array of objects representing build reports.
